

The Islamic Adventure: Game World and Mechanics

Youssef Mahmoud AbdEllah
ID: 202201788

Part 1: Game World:

Locations:

The game has two worlds, and every world has its own locations. First location that the player will go is the **Adventure Museum**. The museum will have multiple historical objects that vary according to the world the player might choose to go to. There will be two roads one road will make the player go to The Battles and the other road will be the Golden Age world where the player will walk through portals.

The Battle locations :

Most of locations will be according to the historical side and mostly happened in Mecca or Madina the game will cover the battles locations that happened when the **prophet** is still alive so the locations are :

Badr:

One of the most important initial fights in Islamic history. The game can exhibit the approaches of the Prophet Muhammad (PBUH) and the Muslim troops over the Quraysh tribe. Player can take part in the strategy-centric tasks, duplicate the fighting plans, and experience the central stages like the Prophet's guiding presence.

Uhud:

Player can engage with this crucial confrontation between the first Muslims and Quraysh army and study the principles of military strategy, leadership, and resilience. The paradox of such challenges may be like to find the right proportion/ratio between the two contradictory forces for example the defense tactics and the morale of the army.

Hunayn:

In the Battle of Hunayn, the player's role is to be of significant companionship to Prophet Muhammad (PBUH) through making tactical decisions on how to rally the army, boost morale, and push forward into battle against the ambushing Hawazin tribe. They will engage in real-time combat, commanding resources and reinforcements, and later overseeing the after-action, making moral decisions affecting the battle's outcome and the community.

The Golden Age and The Exploration world:

The Golden age happened in a lot of cities in Islam during the Abbasid rule but in the game the **Andalus** and **Baghdad** city will be the main cities of explorations because these two cities have many old Islamic scholars and wide chances of exploration. There might be side quests that include different cities for example if a quest required for a player to go to **Persia** or **Cairo** to meet a Scholar and experiment an invention with him the game will include these cities as side quests.

Locations are:

House of wisdom:

In this place the player will take the main quests from AI agent NPC that will tell him all the details of the quest like location, goal, and material he collects.

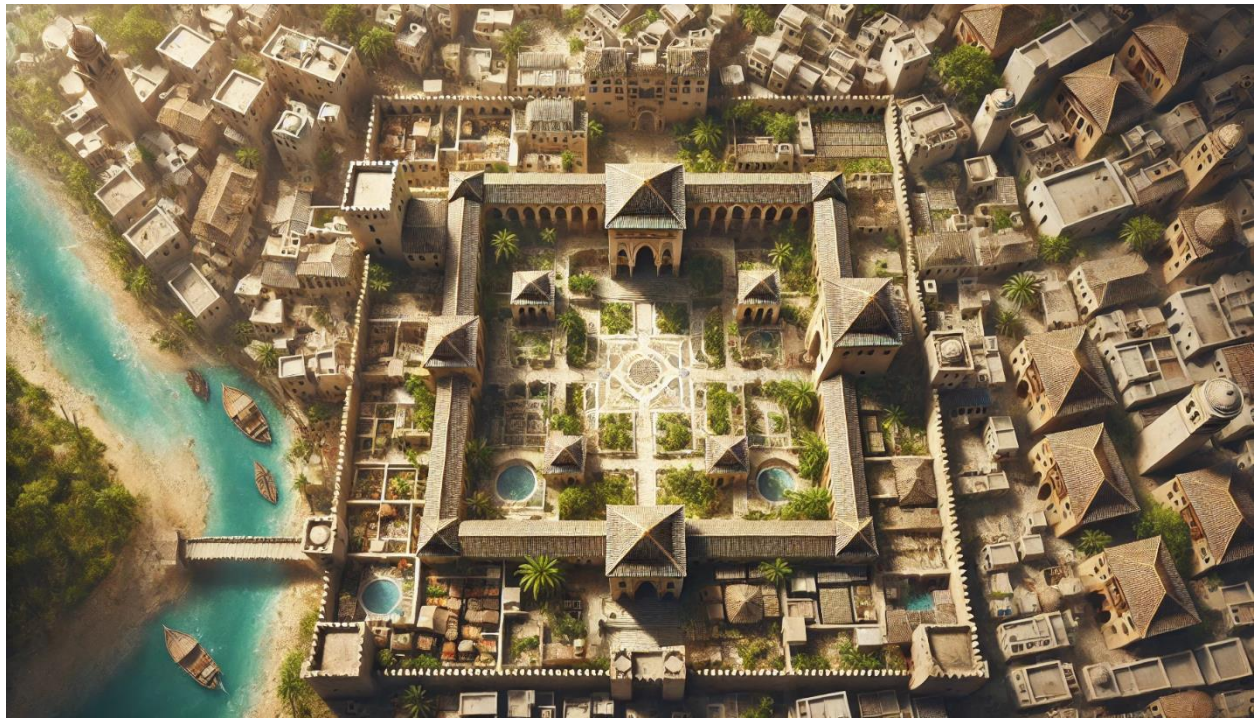

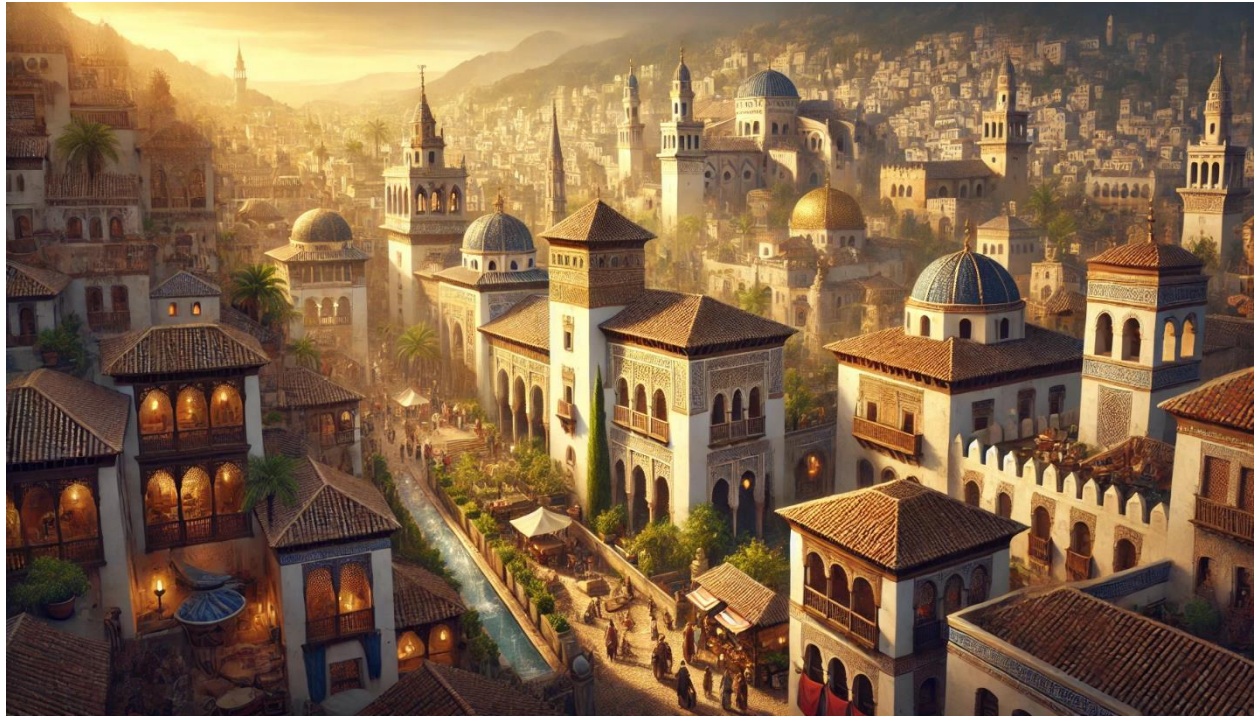

Ancient Bazaars:

As the player explores cities there will be a lot of bazaars where the player can buy clothes, Armors, weapons, shields, herbs, spices and different objects that will be useful for the player.

Blacksmith place:

As the player fights the weapons might get damaged and need to be repaired the blacksmith will help him to repair his objects and according to certain quests the player can collect materials to make new swords or shields or armors.

Objects:

Astrolabe: The Navigator's Tool for Celestial Observation.

Manuscript: The Ancient Texts that Are the Revealing Knowledge Quests.

Sword: As the player can use it for defense during sceneries of Battle.

Bow and Arrows - Melee weapons for ranged fight.

Compass - Indicated using historical maps.

Lantern - Provides light in dark places.

Potion of Knowledge - Makes learning about history easier.

Map of Trade Routes - Opens access to explore new areas.

Coin Pouch - It is used for transactions in bazaars.

Camel - Helps you to travel across the desert.

Scroll of Wisdom - Gives you some advice or tells you the quest information.

Translation Tablet - Translates ancient scripts.

Quill and Ink - The things to be used in copying texts in quests.

Herbal Remedies - The thing that heals you.

Battering Ram - It Is the Thing That Removes The Barriers.

Wooden Shield - The best defense against ranged attacks is a wooden shield.

Treasure Chest - A Place Within Contains Rare Items.

Horse: horses can be used to assist the player in battles and navigation

Water Flask - It is a useful product to keep people from dehydrating.

Ancient Coins - The collectibles as well as the currency.

Medicinal Herbs - The components of health boosts.

Book of Medicine: for player knowledge and leveling up health if he used it

Spices: Trade your merchandise in the trade centers.

Historical Armor: Gives additional hit points to the defense.

Hourglass: Heaves high or low time as desired.

Healing Bandages: Speedy health recovery.

Cultural Artifacts: Mirrors and reveals history.

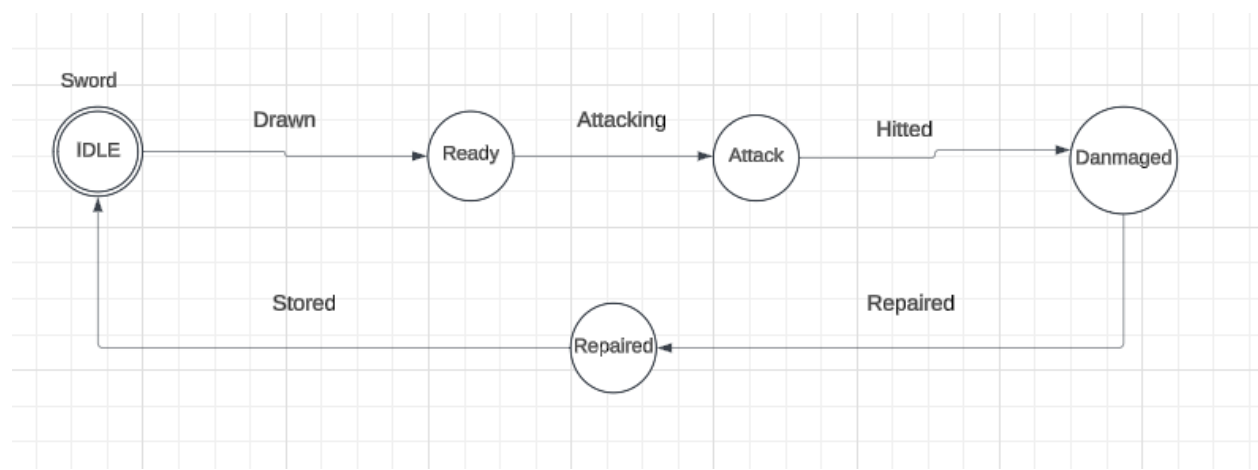

Spears : An Ancient Weapon which looks like an arrow it's a long stick with a sharp and pointed iron

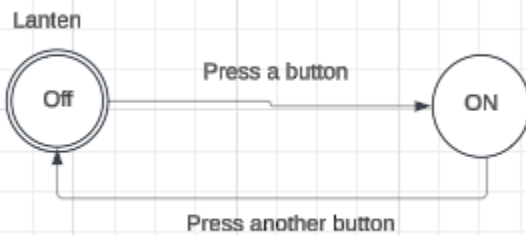

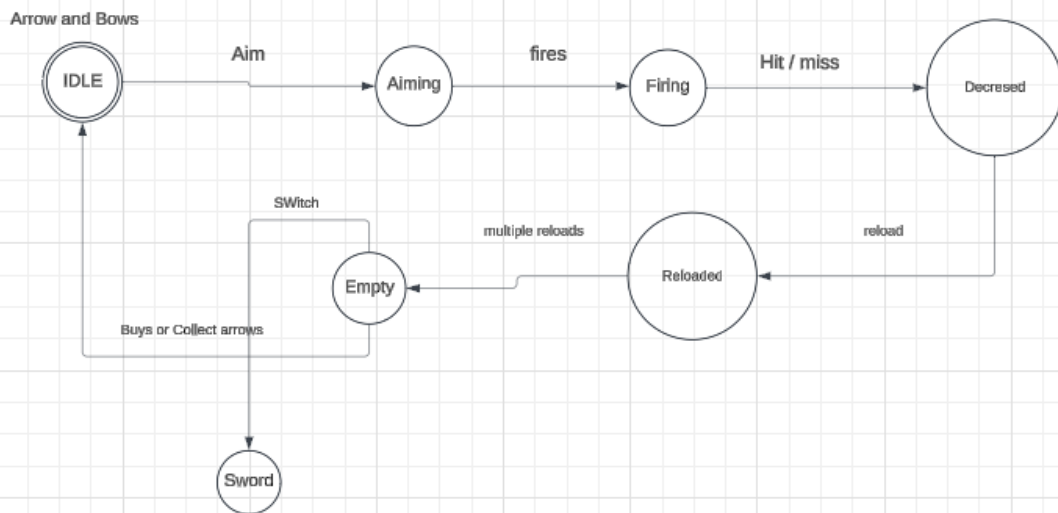

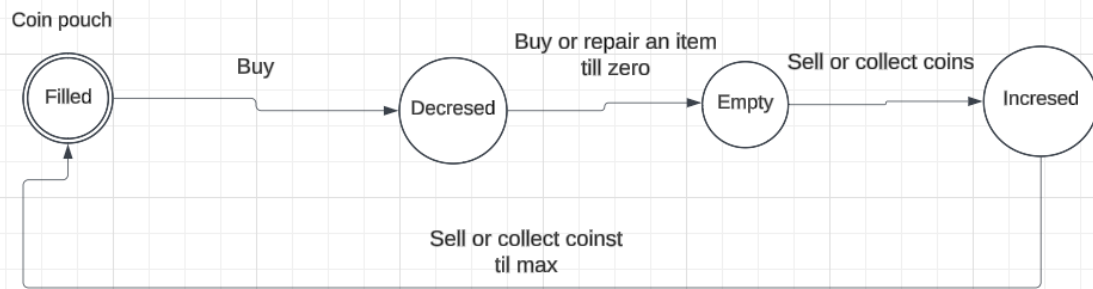

Flags of battles: Each army whether the Islamic army or the opposite army is using its flag

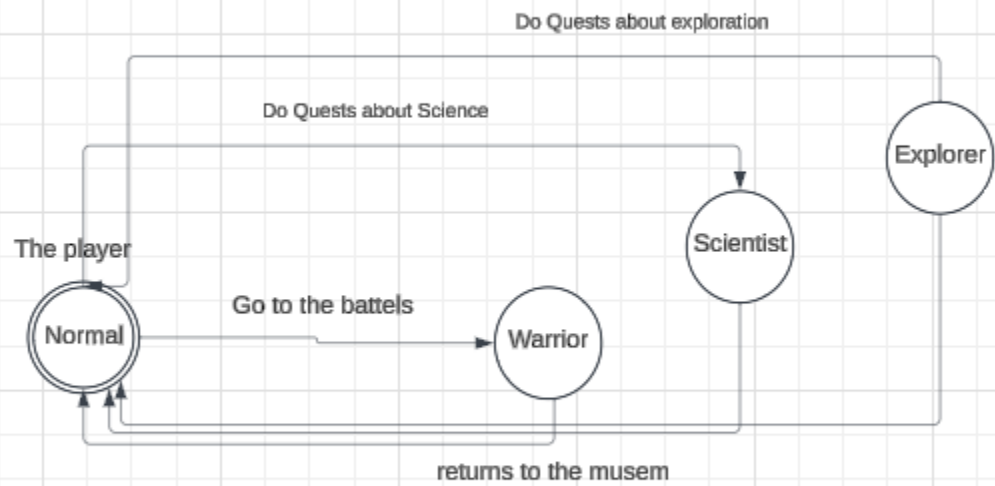

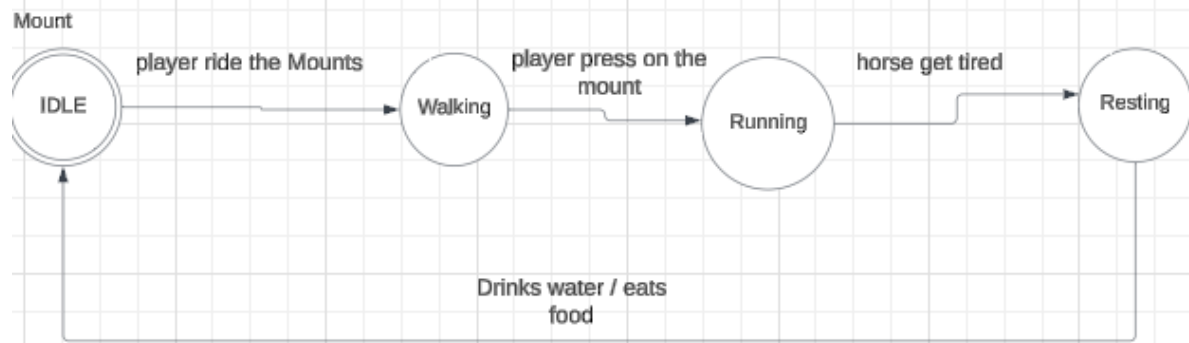

States of objects :

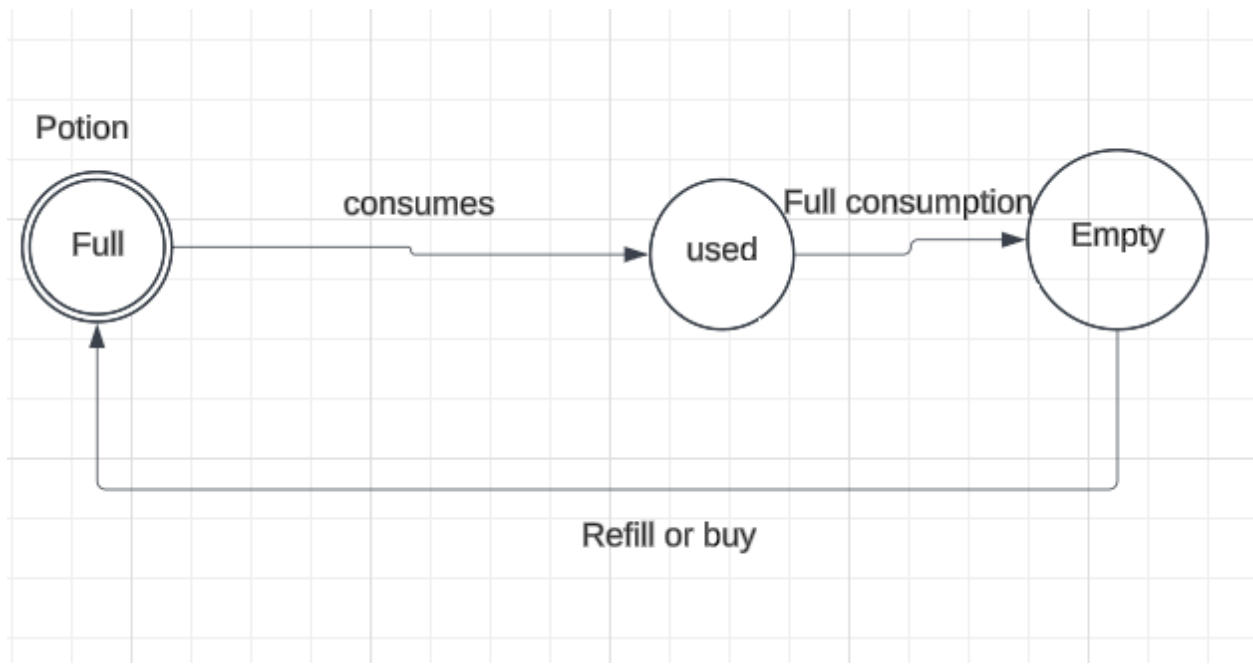

These are the potential states of some objects these objects represents the main tools in the game

.

Game World Scale:

The game world in The Islamic Adventure is set amidst huge tracts of geography. Each site in the game represents an actual key location from the Islamic Golden Age, using actual real-world physical space in kilometers. Nevertheless, each region within the game—a typical example being a city, desert, mountain, or battlefield—is scaled in relation to others to show an impression of its size. For example,

Cities, such as Mecca and Medina, can span up to 10-20 kilometers in total area, serving as a mixture of complex architecture, narrow alleys, marketplaces, and religious sites.

Deserts can span across hundreds of kilometers; usually, the player would have to travel for long distances, especially by horseback or camel.

Mountain ranges or significant historic sites-like the grounds of famous battles-can be well over **50-100** kilometers depending on the region's significance.

These are areas where expansive exploration is allowed, and objects or other landmarks, like structures, trees, or NPCs, fall into scalable size according to physical reality for an immersive experience. For example, towers or minarets may rise 30 to 50 meters high, while swords are proportionally sized to the player's character to make the weapons feel realistic when used in combat.

Relative Sizes of Objects:

Player Character:

The height of the player's character should be around **1.7 to 1.9 meters**. This is a regular height for NPCs and most humanoid figures in the game world.

Weapons: Swords, shields, and bows are designed to life-like sizes based on historical references. For instance:

- Swords would fall between 70 cm and 1 meter in length.
- Bows could be something like 1.5 meters in length; players would need to use proper mechanics for aiming.
- Spears are as long as 2-3 meters.

Mounts:

Both horses and camels are shown in their natural measures, horses average about 1.4 meters at the shoulder, and camels 1.8 meters tall.

Spatial Boundaries

Physical Boundaries:

The Visible Boundaries consists of huge mountain ranges, rivers, or oceans that naturally disrupt the player's movement. In the game world, city walls or fortresses may exist that serve as boundaries where players can't enter unless specific quests are completed that unlock paths leading inside.

Invisible Walls:

These are invisible barriers in some areas that prevent the player from accessing certain regions of the world before the game deems appropriate. An example would be that a region is locked through quest or event; attempting to cross will put the player back to a previous point with a short message.

Fog of War:

Much of the game world remains hidden as the players explore it, and there could be areas with special challenges or treasures included. These reveal themselves on a map as the player develops, giving the impression that this game world is highly expansive and dynamic as new parts are revealed.

Time Dimension

Time System:

Day/Night Cycle:

This game has a natural cycle of day and night. Days will last about 15-20 minutes of real time.

This cycle should affect gameplay: NPC behaviors, quest availability, and environmental conditions.

By day, markets bustle with activity, and most NPCs are active to provide either quests or trade goods.

At night, some areas turn out to be more hazardous because bandits and hostile creatures emerge.

But that's also when some NPCs appear and give secret quests or rare items.

Events based on Time:

The events or quests will be based on time, for instance, praying in a mosque during certain hours of the day. Accomplishing specific tasks before sunset, the time of day can affect what the player can do and his progress: areas will be closed at night, NPCs will only appear in the morning.

Time Progression: It makes use of historic dates and events in the game, where time progresses along with Islamic history. Events could relate to the player's actions, famous battles, empires rising and falling, or spreading Islamic knowledge and inventions. It is an adaptive timeline, not a rigid one; it reacts to the player's choices and actions.

Time Distortion for Fast Travel:

Travel Time: When traveling through the game over large distances, there is the ability to use horses or camels, and the game may speed up this travel time with fast travel mechanics-such as just skipping a certain number of in-game hours or days; however, during travel, random events may occur, such as the appearance of enemies or traders.

Event Triggers: Time promotes specific key events in the game world. The player's timeline may shift any moment depending on either rushing or taking it easy.

Part 2 : Game Mechanics:

Player Movement :

Main movements of the player :

Walking: This is supposed to be at a reasonable pace in order to see the environment or navigate tight areas.

Running: It gives the possibility to move faster with the avatar, but this action will deplete the energy of the character little by little.

Jumping: The Character will be able to jump obstacles, climb small cliffs, and traverse difficult terrain.

Fighting: The player will fight depending on the situation, with bows, close-range weapons, and even fists.

Item Interaction:

With the items, there are a lot of ways to pick them up and interact with them: things such as weapons-food, swords, spears, bows, and shields can all be equipped. A player can swing a sword, defend with a shield, or make a ranged attack with a bow.

Equipment/Tools:

topography maps, compasses, and canteens of water could aid in prospecting and survival.

Consumables: include things such as food and healing potions, which can be collected and consumed to restore a certain amount of health or stamina.

Mounts:

Horse/camel riding:

This will enable the player to get on a horse or a camel for faster travel across the wide world. The mount can be used in combat-a player can fight while on horseback or on camelback.

A mount would have its own endurance and health and thus needs good care, such as feeding and rest.

Combat System:

1- Melee Combat:

- The player will attack the enemies with swords, bows and arrows, or spears. Each of these weapon types has its different attacks, speed, and damage.
- Blocking System: The player blocks an oncoming attack, shield and weapon equipped.

- **Combos and Power Moves:** The player uses combos or powers up a move to deal more damage.

2- Ranged Combat:

- Some can draw out their bows to attack by shooting arrows at long-range enemies.
- Arrows can be enchanted with special effects, fire-tipped, or poison-tipped.

3- Dodging/Parry

- Players can do a roll or sidestep to avoid attacks.
- A well-timed parry against an enemy attack will stagger the opponent, who becomes open to an attack.

Stamina/Health System:

Health:

Health Bar decreases with taking damage. This can be regained using food items, potions, or resting.

Stamina:

This is utilized through running, climbing, and heavy attacks. The player must gauge and balance their stamina so as not to become exhausted during combat or in moving around the environment.

Environment Interaction

Climbing and Scaling: Certain terrains, such as cliffs and walls, can be climbed.

Swimming: Players are capable of swimming across rivers and lakes, all the while keeping an eye on their stamina to avoid drowning.

Weather Effects: Scorching heat in the desert, storms in the mountains- all this may affect the player and need some preparation on his part, like carrying water or wearing the proper gear.

Quest System:

The players will be able to undertake different quests from NPCs, from the simplest fetch-type missions to more complex multi-stage ones.

Quests may include combat, puzzle solving, or exploration; rewards include gold, gear, and experience points earned.

Progression System:

Ability Upgrades: Examples of newabilities include upgraded combat, running speed, and crafting items. **Weapon/Armour:** Resources within the game allow upgrading of items.

NPCs Interactions with the player:

1. Types of NPCs

NPCs will be divided into a few categories depending on their purpose in the game.

Quest Givers: Given the purpose of providing missions or tasks to players, usually attached to the main storyline or side-quests.

Merchants and Traders: Sell items, weapons, mounts, and supplies.

Companions: Characters that may join the player in his journey and give support either in combat or during exploration.

Informants and Guides: characters like The Whisperer that give away some hints or lore or direction.

Enemies: hostile NPCs wherein interaction is done by fighting or confronting the enemy characters.

Civilians: Neutral NPCs who populate the towns and cities for realism in the game world. Mostly they will be **Ai** agents to ensure the realness of the player experience

2. Types of Interactions

Dialogue System:

Branching Conversations:

- Players can select dialogue options throughout conversations. The selections are:
- Unlock new quests or story paths and reveal hidden information about the game world.
- The players' dialogue choices might impact the NPC's attitude toward them (for instance friendliness or hostility).

Dynamic Responses: The NPC's reactions will be based on the player's actions, reputation, or the chosen dialogue. The NPC's bad reputation may refuse to deal with the player, and therefore the merchandise you might have.

Quest Initiation and Completion:

- NPCs will frame their quests with context ranging from personal short stories and conundrums to historical relevance.
- Upon completing the quests, NPCs might reward the player with
 - Experience points for leveling up.
 - Items such as weapons, gold, or rare materials.
 - New lore or access to restricted areas.

Trading and Bartering:

Merchants and traders will give the player the chance to: Buy and sell items barter for better deals if the player has high charisma or trade skills.

Combat Interactions:

Bandits, and other hostile NPCs, such as enemy soldiers, will attack the player if they enter the territory or act aggressively.

Players can engage in combat, negotiate peace, or escape.

Companions:

Some NPCs can accompany the player and act as companions, such as: Provide: Combat assistance (for instance: archery support or healing).

Additional dialogue or story information. Access to special abilities or knowledge (for instance, decodes ancient texts).

3. Mechanics of Interaction

Proximity-Based Activation:

As the player comes up to NPCs those will recognize the player with context-aware greetings or comments.

A key/button press will commence a deeper interaction (e.g., opening dialogue menu).

Reputation System:

Player actions reputation system: if the player helps or harms NPCs their reputation will shift.

High Reputation: The NPCs will provide greater trade agreements, exclusive quests, and rewards.

Low Reputation: The NPCs might divert the player, ask for higher prices, or they might even get hostile.

Timed Events:

Some NPCs come into existence only for some time during the day or during some specific events. For example: A traveling merchant may only be in a city at dawn. A secretive informant will only release information if you meet him in the hidden location at midnight.

Special Gestures or Puzzles:

There will be some NPCs who do not require verbal interactions, like: Providing something to them in order to win over their trust. Figuring out a riddle or puzzle to deal with their quest. Demonstrating proficiency in combat or strategy to outsmart them.

Examples of NPC Interactions

The Blacksmith:

Interaction: The blacksmith gives an option to repair or upgrade weapons for the price.

Additionally, he spreads a rumor about a secret treasure of a cave near the village.

Mechanic: His quests for the player is to get some rare materials may lead to showing the player some new weapon designs.

The Merchant: Interaction:

The merchant trading on the Silk Road sells drugs, textiles, and weapons. Players can choose the amount to pay based on their charisma skills.

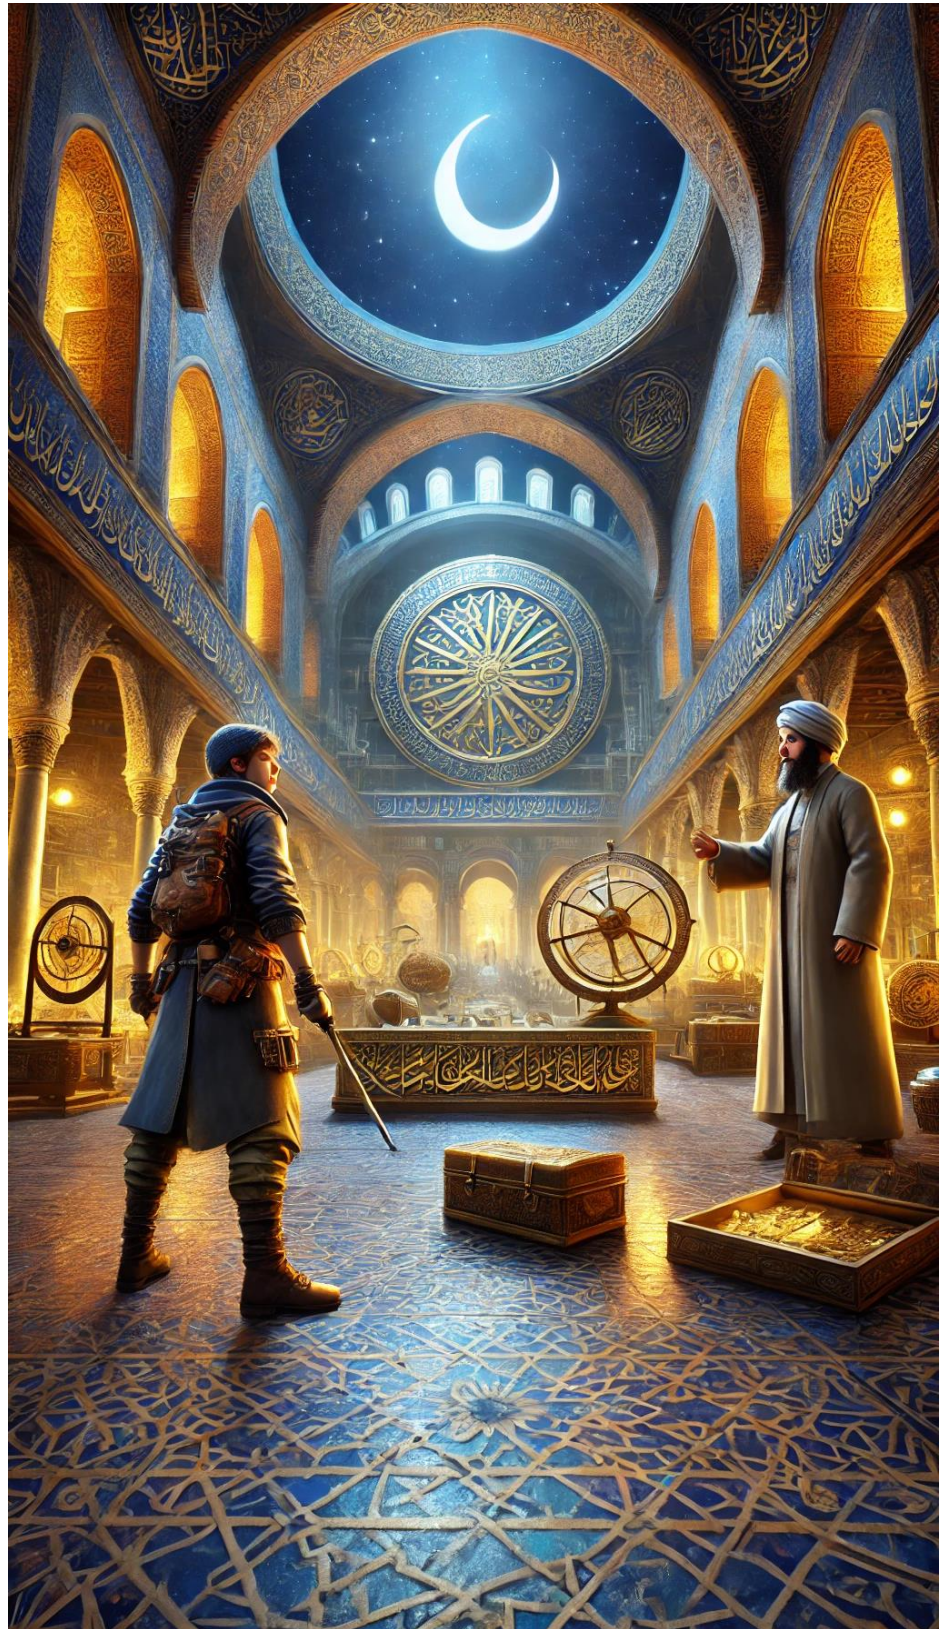

The Rebel Leader: Interaction:

A character leading the opposition group seeks the player's help to liberate the town from cruel rulers. Based on the player's action, the town may be prosperous or get into a mess.

The Wandering Scholar:

Interaction: The scholar proposes to interpret an ancient text in exchange for some rare information or artifacts acquired by the player during their journeys.
